Core Capabilities

Manufacturing

We fabricate a range of stowage, seating and cargo containment components including tie-downs, netting and protective covers for military vehicles as well as interior furnishings such as insulation panels for the bus and rail transport industry. Manufacturing processes include: cutting, sewing, bonding, heat welding, stencilling, installation of grommets and fasteners.

Assembly

We assemble vehicle sub-components including such items as laminated interior panels for buses and crew seat assemblies for military ground vehicles. Our flexible plant layout allows us to tailor production set-ups to meet specific customer requirements.

Kitting

We produce customer configured kits comprised of parts we manufacture in-house or have fabricated through subcontractors. Our procurement specialists source only from qualified suppliers of sub-components and we flow through all QA clauses to ensure conformance to specifications. Our clients depend on our ability to overcome complex logistics to reduce costs, shorten lead times and delivery quality parts on time.

Logistics

We provide warehousing, distribution and value added logistics services for both domestic prime contractors and international primes seeking a footprint in the US. We have extensive knowledge of Export Controls and are ITAR registered.
